

SUICIDE IN NORTH CAROLINA, 2014

The North Carolina Violent Death Reporting System (NC-VDRS) is a CDC-funded statewide surveillance system that collects detailed information on deaths that occur in North Carolina resulting from violence: homicide, suicide, unintentional firearm deaths, legal intervention and deaths for which intent could not be determined. NC-VDRS is a multi-source system that gathers information from death certificates, medical examiner reports and law enforcement reports. The goal of this system is to aid researchers, legislators, and community interest groups in the development of public health prevention strategies to reduce violent deaths. NC-VDRS began collecting data in January 2004. This document summarizes deaths among North Carolina residents caused by suicide for the year 2014.

Sex-Specific Suicide Rates by Age: NC-VDRS, 2014

~ N.C. Division of Public Health - N.C. Violent Death Reporting System ~

- Of the 1,932 violent deaths in North Carolina in 2014, 1,303 were suicides (67.4%).
- Males consistently had a higher suicide rate than females, regardless of age. The suicide rate peaked for men 85 years and older at a rate of 45.5 per 100,000.
- Among females, the suicide rate peaked for ages 55-64 at 11.2 per 100,000 and steadily declined thereafter.

Note: The trend lines appear incomplete because the number of deaths was too small (i.e., less than 5 deaths) to support the calculation of a rate for these age groups. Rates based on less than 10 deaths are considered unstable and should not be used.

- Eighty-six percent of all suicide victims were identified as non-Hispanic (NH) white.
- NH white males had higher suicide rates than other racial/ethnic groups in North Carolina (28.7 per 100,000).

Method of Death*: NC-VDRS, 2014

~ N.C. Division of Public Health - N.C. Violent Death Reporting System ~

- After firearms (55.7%), hanging (21.7%) and poisoning (18.2%) were the second and third leading causes of suicide, respectively.
- Less than five percent of suicides were completed using a method other than firearms, hanging or poisoning.

*Other includes falls, motor vehicle, sharp instrument, drawing, fire/burns, unknown and other causes of suicide.

Suicide Circumstances*: NC-VDRS, 2014

~ N.C. Division of Public Health - N.C. Violent Death Reporting System ~

*Among those with reported circumstance information. 94.4% of cases had circumstance information. 15 females and 58 males were missing circumstance information.

- Thirty-three percent of male suicide victims and 30.7 percent of female victims with circumstance information were characterized as being currently depressed when they completed suicide.

- Sixty-six percent of females and 47.2 percent of males were characterized as having a current mental health problem.

- Fifty-seven percent of females and 39.9 percent of males were currently being treated for a mental health problem at the time of suicide.

- Approximately twenty-six percent of all suicide victims had disclosed their suicidal intention to someone else.

- Females (28.1%) were more likely to have a history of prior suicide attempts than males (13.9%).
