\*Estimates that are less than 10 deaths should be interpreted with caution.

Data Source: North Carolina State Center for Health Statistics, Vital Statistics Death Certificate Data.

Note: Deaths included are limited to North Carolina residents. Acute causes of alcohol-attributable deaths result from short-term, excessive use of alcohol. Some acute causes of alcohol-attributable deaths include falls, motor vehicle crashes, and alcohol poisonings. Figures are calculated using the Alcohol-Related Disease Impact (ARDI) methodology from the CDC, which provides estimates of alcohol related harms. This methodology was updated in 2022 to reflect the most recent literature, which affected alcohol-attributable fractions, conditions, and cause of death codes. Therefore, this version is not comparable to estimates of alcohol-attributable deaths previously released by the state of North Carolina. Estimates have been rounded to the nearest whole number; this may result in a slight difference in the 'Total' column due to rounding. These causes of death include 18 alcohol-related injuries (ex: poisonings, falls, homicide, suicide). For more information, please visit <https://www.cdc.gov/alcohol/ardi/methods.html>.
