Med/Drug^ Overdose ED Visits by Med/Drug Class:
Vance County, 2019*

Trend lines shown for Med/Drug classes having a monthly average ≥3 visits. It is important to note, if a Med/Drug class is not shown, it does not mean there were no visits, but that the monthly average is less than 3.

Note: Report is based on initial encounter, unintentional and undetermined intent cases only, for ICD10CM overdose codes of drugs and medicaments with dependency potential within T40, T42, T43, T50.7, and T50.9.

Note: Report is restricted to N.C. residents between the ages 15 to 65 years. Drug classes shown are not mutually exclusive, a person may have more than one drug overdose diagnosis code, therefore, a person may be represented in multiple lines in the graph above. *2019 data is provisional; YTD (Year to date).

Data Source: NC DETECT; ED; Syndrome: Overdose: Unintentional/ Undetermined Medication or Drug Overdose (>14<66) (ICD-9/10-CM)

Med/Drug^ Overdose ED Visits by Race/Ethnicity and Age Group

78 Overdose ED Visits for Med/Drugs^ with Dependency Potential in Vance County, 2019*
