349 All opioid overdose ED visits: December 2018
Compared to 439 December 2017

The highest concentration of visits (≥5 residents) by zip code occurred in:
Onslow, Burke, Buncombe, Cumberland, Guilford, Mecklenburg, Randolph, and New Hanover counties.
The highest rates occurred in:
Cumberland (8.9 per 100,000 residents), and New Hanover (8.1 per 100,000 residents) counties.

Note: Counts based on diagnosis (ICD-9/10-CM code) of an opioid overdose of any intent (accidental, intentional, assault, and undetermined) for North Carolina residents. Opioid overdose cases include poisonings with opium, heroin, opioids, methadone, and other synthetic narcotics.
*Emergency department visit data from NC DETECT are provisional and should not be considered final. There may be data quality issues affecting our counts: counties with <10 cases may not be true lack of opioid overdose cases but data quality issues; additionally, some hospitals use non-specific poisoning codes rather than specific opioid poisoning codes.
241 Heroin and synthetic narcotic overdose ED visits: December 2018

Compared to 315 December 2017

Source: NC DETECT: ED; Syndrome: Overdose: Opioid Overdose (ICD-9/10-CM)
