567 All opioid overdose ED visits: December 2019*

Compared to 453 December 2018

The highest concentration of visits (≥5) by zip code occurred in:

Wayne, Wake, Mecklenburg, Pasquotank, Rockingham, and Pitt counties.

The highest rates of visits (≥10) per 100,000 residents occurred in:

Wayne (12.9), Nash (12.8), Rockingham (12.1), and Robeson (12.1) counties.

Note: NH(Non Hispanic). Counts based on diagnosis (ICD-9/10-CM code) of an opioid overdose of any intent (accidental, intentional, assault, and undetermined) for North Carolina residents. Emergency department visit data from NC DETECT are provisional and should not be considered final. There may be data quality issues affecting our counts: counties with <10 cases may not be true lack of opioid overdose cases but data quality issues; additionally, some hospitals use non-specific poisoning codes rather than specific opioid poisoning codes.
Note: NH (Non Hispanic). Counts based on diagnosis (ICD-9/10-CM code) of a heroin or other synthetic narcotic overdose of any intent (accidental, intentional, assault, and undetermined) for North Carolina residents. *Emergency department visit data from NC DETECT are provisional and should not be considered final. There may be data quality issues affecting our counts: counties with <10 cases may not be true lack of opioid overdose cases but data quality issues; additionally, some hospitals use non-specific poisoning codes rather than specific opioid poisoning codes.
