Firearm Deaths in North Carolina, 2017

The North Carolina Violent Death Reporting System (NC-VDRS) is a CDC-funded statewide surveillance system that collects detailed information on deaths that occur in North Carolina resulting from violence: homicide, suicide, unintentional firearm deaths, legal intervention and deaths for which intent could not be determined. NC-VDRS is a multi-source system that gathers information from death certificates, medical examiner reports and law enforcement reports. The goal of this system is to aid researchers, legislators, and community interest groups in the development of public health prevention strategies to reduce violent deaths. NC-VDRS began collecting data in January 2004. This document summarizes firearm-related deaths among North Carolina residents for the year 2017.

- In 2017, there were 1,403 firearm-related deaths among North Carolina (N.C.) residents.
- Nearly two-thirds (61.0%) of all violent deaths in N.C. during 2017 were caused by firearms.
- Specific causes of firearm-related deaths included suicide (59.9%), homicide (37.6%), legal intervention involving discharge of firearm (1.4%), unintentional discharge of firearm (0.9%), and undetermined intent (0.2%).
- The rate of firearm-related deaths per 100,000 population remained relatively stable from 2008 (12.3) to 2017 (13.7).
- The rate of firearm-related homicides varied from a low of 3.6 in 2010 to a high of 5.3 in 2016.
- The rate of firearm-related suicides varied from a low of 8.2 in 2009 to a high of 9.3 in 2017.

- The most common locations of firearm-related deaths were apartment or home (70.5%); motor vehicle, excluding school bus and public transportation (10.3%); natural areas such as a field, river, beach, or woods (3.1%); street/road, sidewalk or alley (4.9%); other commercial establishment, such as a grocery store, retail outlet, or laundromat (3.3%); and parking lot or public parking garage (1.1%).
• The majority of firearm-related deaths were among males (82.1%).

• The firearm-related death rate per 100,000 population peaked among men ages 85 and older (39.1) and 20-24 (37.4), while the rate among women peaked across ages 20-24 (7.7).

• Suicide was the most common type of firearm-related death among NH whites (84.5%), and NH Asians (54.5%), while homicide was the most common type among NH blacks (81.0%) and NH American Indians (50.0%).

• There were only 18 total firearm-related deaths among American Indians, 11 among Asians, and 60 among Hispanics in 2017.
