The North Carolina Violent Death Reporting System (NC-VDRS) is a CDC-funded statewide surveillance system that collects detailed information on deaths that occur in North Carolina resulting from violence: homicide, suicide, unintentional firearm deaths, legal intervention and deaths for which intent could not be determined. NC-VDRS is a multi-source system that gathers information from death certificates, medical examiner reports and law enforcement reports. The goal of this system is to aid researchers, legislators, and community interest groups in the development of public health prevention strategies to reduce violent deaths. All deaths reported in this document are based on location of occurrence rather than residence and, instead of a rate, the occurrent ratio is reported. This statistic is derived from the total number of violent deaths resulting from injuries in a specified geographic region divided by the number of residents in this region. This document summarizes all fatal injuries from violence that occurred in Guilford County for the years 2007-2016.

- In Guilford County, the suicide ratio was 2.8 times higher in males than females, and the homicide ratio was 4.6 times higher in males than females.

- Patterns of suicide and homicide differed by race. Suicide victims were more likely to be Non-Hispanic (NH) white than NH Black. NH Whites had 18.4 suicides per 100,000 population versus 4.6 suicides per 100,000 population in NH Blacks. All other racial groups combined had 20 suicides.

- In contrast, NH Blacks had 14.3 homicides per 100,000 population as opposed to NH whites who had 2.6 homicides per 100,000 population. All other racial groups combined had 33 homicides.

- For the years 2007-2016, there were 933 violent deaths from injuries sustained in Guilford County. Of these 933 deaths, 909 were N.C. residents (97.4%) and 846 were Guilford County residents (90.7%).

- There were 537 suicides (57.6%), 341 homicides (36.5%), 5 unintentional firearm deaths (0.5%), 21 deaths from legal intervention (2.3%) and 29 deaths of undetermined intent (3.1%).
